Thanks for the heads up. I knew that they were planning to remove their USTs.

Just an FYI. I received a call from the folks at Izatys asking about AST set back requirements. They plan to install AST's and run piping out to the end of the dock for a dispenser. I could not give them accurate answers since they did not know what type of tanks they would purchase and the set back distance depends on the tank type. I did mention that they should follow PEI 1000 and all SPCC rules.
